

DunRite Technologies is a customer-centric firm offering key services in the areas of AI Chatbot, Big Data, Enterprise Mobile Application and Web Application development.

We revel in an environment of open collaboration as we partner with businesses to create complete ecosystems of connected experiences.

Our creative minds and technical proficiency are our primary engines as we clearly map out your stated and implied needs to deliver agile, functional and aesthetic solutions.

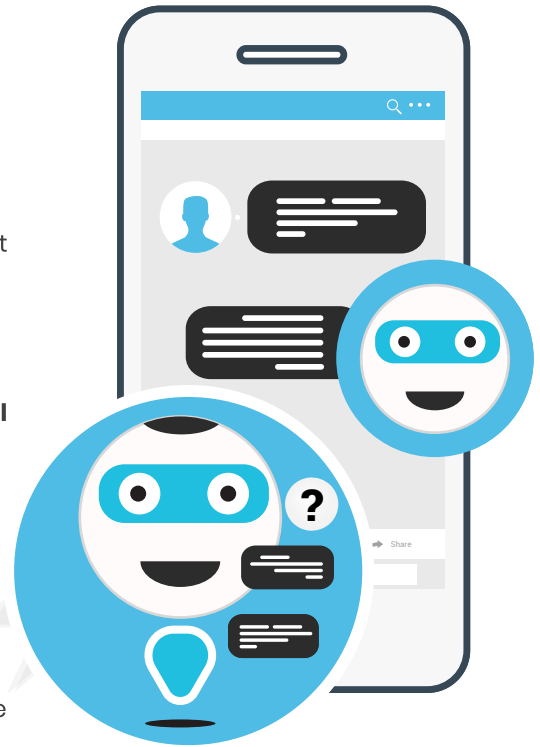

Our expert team of project managers, software architects and designers use the latest in technology to create actionable results and help you with a quick return on investment. We will work to understand your goals and provide solutions to match your needs.

## AI Chatbot

Chatbots are semi-intelligent software that can adapt to a user's interaction pattern to provide sufficiently satisfactory answers to sophisticated queries. While there are several forms of chatbots, the most commonly used ones are based on the idea of implementing a set of inbuilt templates that the chatbot software can tap into for answering queries an user may pose.

We possess a wide range of skillsets in terms of **Machine Learning, Artificial Intelligence** and **Natural Language Processing**. We intend to implement a chatbot that includes a simple, yet efficient strategy of fusing the ideas of natural language processing and machine learning with human intelligence in the form of specific subject matter expertise.

Our goal is to provide an experience to end consumers in such a way that they feel the warmth of interacting with a real human, while our clients save costs and improve on their efficiency by deploying our chatbots.

## Big Data Consulting

Business Data plays an imperative part in strategy enhancement and business operations. We work with the industry's top tools for analytical reports, dashboard interface and data visualization. We are experts in two of the most accepted languages for Analytics & Machine Learning; Python and C#.

Every business in today's world is moving at a blinding pace. Companies need to adapt to meet customer's demand. As volumes of data are gathered, analytics, artificial intelligence (AI) and supporting technologies hold the promise of new business insights and significantly reduced costs, but many organizations don't know how to begin to harness the power that analytics provide.

We have the exposure and awareness of market trends that have been gained through real-world projects in Big Data analytics and competence to discover insights which would bring value to your business. Having the ability to understand your needs, we bridge the gap between potential and performance.

## Key Features

Seamless  
Integration

Deep  
Diagnosis

Real-Time  
Optimization

Quick-Turnaround  
Time

Dedicated  
Account Manager

# Mobile Application Development

With mobile phones becoming smarter by the minutes and ubiquitous by the hour, a mobile app is your gateway to business efficiency and customer delight.

We talk many languages, understand multiple devices and work with conviction to deliver attractive, feature-rich applications that are engaging intuitive and functional. Our expert mobile app developers are well-versed in building both Native and Cross- Platform/Hybrid apps that users need and want. From ideation to publishing — we have you covered all the way.
